Quayle Action

1. This application is in condition for allowance except for the following formal matters:

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the construct for compiling a plurality of measurements, a population of devices, construct for determining a variance, construct for evaluating the plurality of variances, construct for identifying a discontinuity, and construct for determining a demarcation (claim 18) must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New

Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.

Reasons For Allowance

2. The combination as claimed wherein a method or system for analyzing accuracy of industrial measurement data comprising determining a variance from the modeling function for each measurement in the plurality of measurements to form a corresponding plurality of variances; evaluating the plurality of variances for discontinuities; identifying a discontinuity within the plurality of variances; and utilizing the discontinuity to determine a demarcation between accurate and inaccurate measurement data (claim 1, 18, 19) is not disclosed, suggested, or made obvious by the prior art of record.

Patel et al. (US 20050064608) discloses a system (200) for selectively controlling post-CMP dishing effects occurring in semiconductor wafers (Abstract, lines 1-3) comprising a modeling function (214) receiving the measurement, the indicator, and the

Art Unit: 2863

dishing target, and evaluates any differential between the dishing target and actual dishing. The modeling function generates a processing target to eliminate the differential, and modifies this process responsive to the indicator (Abstract, lines 11-16). However, this prior art was not made by another inventor.
